

Replacement Part Instructions

# How to Replace a 60 Minute Timer

## Tools Needed:

-  Flathead Screwdriver or 1/4" Nut Driver
-  Phillips Screwdriver

 **ELECTRICAL WARNING!**  
DISCONNECT ALL POWER TO UNIT AT SERVICE CENTER BEFORE SERVICING OR REWIRING UNIT.

## 1. Disconnect power

Disconnect power to unit by shutting off electricity at service entrance (electrical breaker box) before beginning service to unit.

## 2. Remove timer knob

Using a flathead screwdriver, gently pry off the timer knob and lay off to the side.

## 3. Unscrew electrical raceway

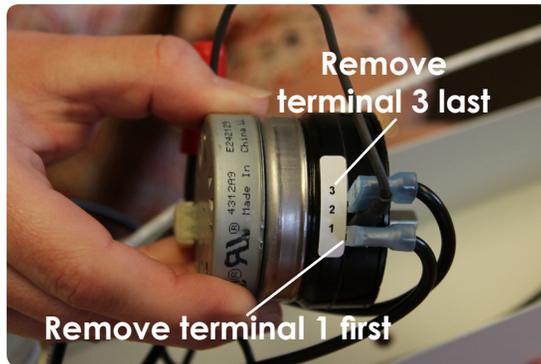

Begin removing electrical raceway from unit by removing small screws at the top and bottom of raceway with a flathead screwdriver. Gently pull raceway out of unit, being careful of wires that are still connected.

## 4. Remove screws on printed timer face

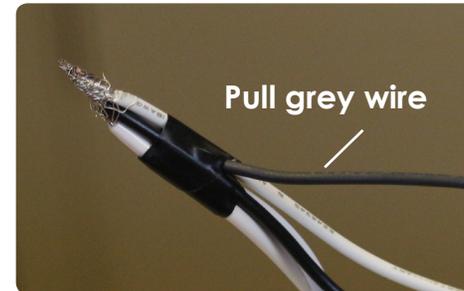

Using a Phillips screwdriver, remove the two screws on the sides of the timer face (where the knob was).

## 5. Remove old timer

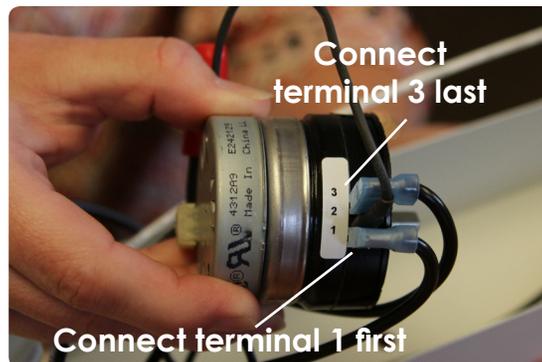

Turn the raceway over so the back is exposed. Lift out the timer and remove the flag shaped connectors from marked terminal 1, and then from marked terminal 3.

## 6. Remove old timer wire

Unscrew the wire nut on bundle of white wires by twisting nut counter-clockwise. Locate the dark grey wire that connects to timer and remove from bundle by gently pulling it.

## 7. Connect new timer

Connect raceway wires to new timer by first connecting long black wire to terminal marked 1. Then connect the shorter wire to terminal marked 3.

## 8. Connect new wire

Locate dark grey wire at back of timer and lay it flush with striped ends of white wire bundle. Replace wire nut by screwing clockwise with downward pressure. **Note: make sure wires are snug and cap is secured tightly.**

## 9. Install timer

Place shaft of new timer through hole in raceway with the three terminals on top pointing towards back of spotlight.

## 10. Replace face screws & timer knob

Turn raceway over and screw the two face screws on timer face with Phillips screwdriver. You may need to align screw holes before inserting screws. Replace timer knob on new timer by gently pushing onto shaft of timer.

## 11. Re-install electrical raceway

Return raceway to unit, screwing top and bottom screws to hold in place.

## 12. Restore power

Restore power to unit at electric service entrance (breaker box).
