

# DDL-8100B-7

Direct-drive, 1-needle, Lockstitch Machine with Automatic Thread Trimmer

## Energy-saving servomotor is installed in the direct-drive style.

### Features

- The direct drive system has been adopted.
- Both the control box and the operation panel are integrated with the machine head.
- Dramatically advanced availability for material.
- Maintainability is improved.

## Energy-saving servomotor is installed in the direct-drive style.

The energy-saving and highly efficient servomotor is installed in the direct-drive style to transmit power without loss to the sewing machine, thereby providing improved responsiveness, quicker start-up and increased needle penetration force.

### The compact-sized control box and operation panel

Both the compact-sized control box and the operation panel are integrated with the machine head. The machine is provided as standard with the operation panel.

The operation panel is equipped with many different functions.

#### Function table of operation panel

|                                                                                                                                                              |                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| Automatic reverse-feed stitching<br>(performed at start/end of sewing; selectable)                                                                           | 0 to 15 stitches                       |
| Double reverse-feed stitching<br>(performed at start/end of sewing; selectable)                                                                              | 0 to 15 stitches                       |
| Constant-dimension sewing<br>(performed at start/end of sewing; selectable)                                                                                  | 1 to 99 stitches /<br>0 to 15 stitches |
| Rectangular stitching (performed at start/end of sewing; selectable)                                                                                         | 1 to 99 stitches /<br>0 to 15 stitches |
| Pocket sewing A (performed at start/end of sewing; selectable)                                                                                               | 1 to 99 stitches /<br>0 to 15 stitches |
| Pocket sewing B (performed at start/end of sewing; selectable)                                                                                               | 1 to 99 stitches /<br>0 to 15 stitches |
| Multi-layer stitching                                                                                                                                        | 0 to 15 stitches /<br>0 to 15 times    |
| Needle up/down compensating stitch                                                                                                                           | <input type="radio"/>                  |
| Automatic sewing (The time when the automatic sewing is carried out can be selected among constant-dimension sewing, rectangular stitching or pocket sewing) | <input type="radio"/>                  |
| Soft start                                                                                                                                                   | <input type="radio"/>                  |

The power switch is built in the control box to further improve ease of setup. The auto-lifter can also be connected to the control box with ease.

**Responsiveness to the material is improved to sew many different types of materials.**

### The thread take-up lever which provides a wider sewing range is adopted.

The use of the newly-developed thread take-up lever increases the needle bar stroke (35mm). With this feature, the sewing machine is able to sew many different types of materials ranging from light-weight ones to medium-weight denim.

### The new tension spring is adopted.

The new tension spring is adopted to support the sewing of materials which differ in thickness ranging from light-weight materials to medium weight ones.

### Newly-developed hook is adopted.

The newly-developed hook is adopted. This hook can handle even a higher-count thread with consistency.

### Improved maintainability

#### Feed-cam timing adjusting hole

The adjusting hole is provided on the top of the arm. This hole facilitates adjustment of the feed-cam timing.

#### Direct-drive type

Since the sewing machine has no V-belt, the operator needs neither to clean up shavings from the V-belt, nor adjust the V-belt tension.

### Improved workability

#### Thread trimming unit adjusting hole (Plain knife type)

Thread trimming unit adjusting hole is provided. Adjustment of the hook timing (temporary fixing) can be carried out without tilting the sewing machine.

#### Needle bar thread holder

It does not require the operator to pass the thread through the needle bar, thereby helping reduce the operator's fatigue.

#### LED light is provided as standard.

A thinner LED light is provided near the needle entry area. Its illuminance is adjustable steplessly.

## SPECIFICATIONS

| Model name                         | DDL-8100BM-7                                  |
|------------------------------------|-----------------------------------------------|
| Application                        | For light-to medium-weight                    |
| Max. sewing speed                  | 4,000 sti/min                                 |
| Max. stitch length                 | 5mm                                           |
| Presser foot                       | By hand : 5.5mm, By Knee : 13mm               |
| Lubricating oil                    | JUKI Machine Oil 7<br>(equivalent to ISO VG7) |
| Needle                             | DBx1 (#14) #14~#18                            |
| Power consumption                  | 220VA                                         |
| Weight of machine head             | 32kg (include motor, control box, cover)      |
| Outside dimensions of package (mm) | 833 × 278 × 459 (0.106m <sup>3</sup> )        |

\*sti/min\* stands for "Stitches per Minute."

## WHEN YOU PLACE ORDERS

Please note when placing orders, that the model name should be written as follows:

| Application                | Code | Power supply                                  | Code                        |
|----------------------------|------|-----------------------------------------------|-----------------------------|
| For light-to medium-weight | M    | Single-phase 220V (for General Export, China) | K                           |
|                            |      | Standard, Single-phase 220V                   | L                           |
| <b>DDL8100BM7</b> □ □ □ □  |      |                                               |                             |
| Trimming                   | Code | Wiper and one-touch type reverse feed         |                             |
| Plain knife                | R    | Wiper                                         | One-touch type reverse feed |
| Rotary knife               |      | Not provided                                  | Provided                    |
|                            |      | Provided                                      | Provided                    |

#### JUKI CORPORATION HEAD OFFICE

Juki Corporation operates an environmental management system to promote and conduct the following as the company engages in the research, development, design, sales, distribution, and maintenance of industrial sewing machines, household sewing machines, industrial robots, etc., in the provision of sales and maintenance services for data entry systems:

- (1) The development of products and engineering processes that are safe to the environment
- (2) Green procurement and green purchasing
- (3) Energy conservation and reduction in carbon-dioxide emissions
- (4) Resource saving (reduction of papers purchased, etc.)
- (5) Reduction and recycling of waste
- (6) Improvement of logistics efficiency (modal shift and improvement of packaging, packing, etc.)
