

The Quilter's Creative Touch Software was designed to run on a Windows Tablet (can also be installed on your home computer). Save time with a tablet, by having all the functions available at the sewing machine, where all the quilting is done.

We have provided a short list of tablets that work with our system, but you can use any Windows 7 or 8 based device as long as it meets the minimum *requirements** (listed on back).

Recommended Windows 8 Tablets
